

COMP1911 – JavaScript Workshop

Lab #7

This lab is due via FTP to BCIT's server before the following Sunday 11:59 pm (eight days from now).

Name your file as `firstname_lastname.html` (e.g. Tiger Woods would submit a file named `tiger_woods.html`).

Use an FTP client to upload your file as follows:

Hostname `myftp.bcit.ca`

Servertype: FTPES – FTP over explicit TLS/SSL

Username: your student number (e.g. A00112233)

Password: usually, your birth date (e.g. yymmdd such as 19801231)

Port: 21

Directory: `IN/COMP/1911`

For more information about uploading the file see:

<https://helpdesk.bcit.ca/fsr/sr/network/734.html>

COMP1911 – JavaScript Workshop

Lab #7

Create a javascript / html file that has the following behaviors:

Create a form **that is validated using jQuery and/or any jQuery plugin** that you like.

There is a form on the page with the following fields and rules. If the user submits a form but the rules are broken for any field, the behavior listed below must be done to advise the user. **Use jQuery** for this assignment!

Field	Rule
Username	Required; must be 3 – 6 characters in length
Birthdate	Must be a date
Email address	Required; must be a valid email address
Home page	Must be a valid URL

Whenever an rule gets broken for a field, that field must have a yellow background color applied to it for three seconds; then it changes back to the original white.

Make sure you include your jQuery script with your submission. Put all of your files into one folder, zip that folder, name the folder in the format `firstname_lastname.zip`, and upload that zip file to BCIT's server.
